

ADHAM AKMAL BIN AZMI

Full-Stack Engineer — React · Next.js · Node.js · Python

Kuala Rompin, Pahang, Malaysia · +60 12-298 7734 · adham_92@live.com · adhamaa.github.io · github.com/adhamaa · linkedin.com/in/adham-akmal-azmi

SUMMARY

Full-stack engineer with 5+ years building and shipping production web applications. Spent four years as Application Engineer / Full-Stack Engineer at Shinkels Teknik, leading frontend architecture and writing the Node.js/Express, GraphQL and Python Flask services behind it. Independently of that I have designed, built and shipped three live products of my own — an accounting and HR system, a clinic case-management app and a certificate registry — each owned end to end: PostgreSQL schema, Hono API on Cloudflare Workers, React interface and deployment. Comfortable being the only engineer on a product, and equally comfortable setting standards and reviewing code inside a team.

EXPERIENCE

Application Engineer / Full-Stack Engineer Johor Bahru · Jul 2022 – Aug 2026
— Shinkels Teknik Sdn Bhd

- Architected reusable React and TypeScript component libraries shared across multiple client projects, cutting the time to stand up a new screen from days to hours.
- Designed and shipped backend services in Node.js and Express — REST and GraphQL endpoints covering authentication, authorization and integration with both SQL and NoSQL data stores.
- Built Python Flask APIs for services better suited to the Python ecosystem, keeping their contracts and auth model consistent with the Node services alongside them.
- Owned application state strategy across large single-page apps (Redux, Context API, React Router), keeping them maintainable as feature count grew.
- Translated UX wireframes into responsive, cross-browser interfaces with consistent behaviour on desktop and mobile.
- Ran CI/CD and release operations (Git, Docker, PM2, Linux) so deployments became routine rather than events.
- Adopted AI pair-programming into the daily workflow without leaning on it — generated code was a first draft, read line by line, corrected to team standards and optimised before it reached review.
- Set coding standards, led code reviews and mentored junior developers.

SKILLS

TypeScript

JavaScript

React

Next.js

Vite

Tailwind CSS

Redux

Context API

React Router

HTML5

CSS3

Figma

Node.js

CERTIFICATIONS

JavaScript Algorithms & Data Structures
freeCodeCamp · 2020

Responsive Web Design
freeCodeCamp · 2019

- Diagnosed and resolved defects before release, reducing the number that reached production.
- Refactored slow and brittle code paths, improving both runtime performance and the team's ability to change them safely.
- Delivered features to tight deadlines alongside design and QA in a cross-functional team.

Freelance Web Developer — Self-employed

Batu Pahat · Sep 2019 – Dec 2021

- Designed and shipped marketing sites and storefronts end to end, from Figma and Adobe XD mockups through to a live domain.
- Built static sites with Gatsby and Jekyll and content-managed sites on headless CMSs including Strapi, Netlify CMS and headless WordPress.
- Set up e-commerce on Shopify and EasyStore, including theme work in Liquid.
- Designed and built the original certificate issuing system for a training programme in Excel — logo, certificate template and issuing logic — later rebuilt as the Quantum Hikmah Certificate Register listed below.
- Handled client relationships directly — scope, expectations, revisions and handover.

EDUCATION

Degree, Islamic Studies with Management — Open University Malaysia 2017

Diploma, Quran wal Qiraat — Kolej Universiti Islam Johor Sultan Ibrahim 2013

SELECTED PROJECTS — MY OWN PRODUCTS, BUILT SOLO END TO END**Sharah CMpro — accounting with HR**admin.sharah.my

One admin console where production, payroll and the ledger share a single database and permission model — cash in/out, trial balance, balance sheet, fixed assets and Tax & Zakat alongside employees, attendance and payroll — with per-entry attribution across multiple users. Designed the schema, wrote the API, built every screen and deployed it.

Vite · React · TypeScript · Hono · Cloudflare Workers · Neon Postgres

Homeopathy Radionic App — clinic case managementhomeopathy-radionic-app.qahwah.my

Takes a practitioner from patient intake to remedy: open a case, work through a resumable multi-step consultation, and produce the resulting remedy set, with full history kept queryable for the next visit. Autosaving, interruption-safe, and bilingual English / Bahasa Melayu.

Next.js · React · TypeScript · Hono · Cloudflare Workers · Neon Postgres

Quantum Hikmah Certificate Register — member & certificate managementqhp-web.qahwah.my

Began as a spreadsheet I built during my freelance years — I designed the logo, the certificate template and the issuing logic — and rebuilt it as a product: certificates generated from programme records, every issued one kept as a lookup-able registry entry, turning verification from a phone call into a query, generated against selectable templates and issued singly or in batch. Carried my own domain rules intact across the migration from Excel to Postgres.
